SUMMARY

Backend-leaning full-stack TypeScript engineer who builds and runs real products end to end. Creator and sole developer of Schoolyn, a multi-tenant school management SaaS with finance and payment workflows, live at schoolyn.academy, and Foodie-POS, a restaurant point-of-sale system with real-time ordering and hardened payment handling. Has built payment code with integer amounts, idempotency keys, row-level locking inside PostgreSQL transactions, audit trails, and tests that cover race conditions.

TECHNICAL SKILLS

Languages	TypeScript · JavaScript · SQL · HTML · CSS
Backend & APIs	Node.js · Express · NestJS (basic) · Next.js Route Handlers · Server Actions · versioned REST APIs · Zod validation · cron jobs
Databases	PostgreSQL · Prisma ORM · raw SQL · transactions · row-level locking · indexes · migrations
Money & Reliability	integer money amounts · idempotency keys · audit trails · transactional outbox · invoice reconciliation
Auth & Security	JWT · Clerk · NextAuth · Supabase Auth · role-based access control · multi-tenant isolation · rate limiting · Argon2 · Helmet
Real-Time	Server-Sent Events · Pusher (WebSockets) · OneSignal push
Frontend & Mobile	React · Next.js (App Router) · Tailwind CSS · TanStack Query · Material UI · React Native · Expo · mobile-first UI · English/Burmese i18n
Testing	Node.js test runner · Vitest · integration tests · concurrency tests · Maestro (end-to-end)
Cloud & Deployment	DigitalOcean · Nginx · PM2 · Cloudflare · Vercel · S3-compatible storage
Workflow	Git · GitHub pull requests · design docs
AI-Assisted Development	Claude · Cursor · ChatGPT

PROJECTS

Schoolyn — Multi-Tenant School Management SaaS

2025 – Present

Creator & sole developer · schoolyn.academy · Formerly EduTrack

- Designed and built a multi-tenant SaaS for school administration, covering student records, attendance, exams and results, fees and invoicing, and parent messaging (270+ commits, 97 Prisma models, 120+ migrations, 240+ indexes).
- Enforced tenant isolation with subdomain-based school resolution and a school-scoped Prisma data layer; built role-based access for 7 application roles with route guards and per-module permissions; ran security reviews and added regression tests against cross-school data access.
- Built finance and payment flows (invoices, payment schedules, receipts, refunds, payroll, and parent payment-proof submission with staff approval) with idempotency keys, a finance audit log, and invoice reconciliation.
- Implemented a transactional outbox for payment notifications: events are written in the same database transaction and delivered by a scheduled worker through OneSignal push and Pusher; used PostgreSQL row locking and raw SQL where Prisma was not enough.
- Built a versioned REST API (/api/v1) for the mobile app and an English/Burmese marketing site; wrote 370+ automated test files (unit and integration), shipped through pull requests, and deployed to a DigitalOcean server with Nginx, PM2, Cloudflare, and health checks.

Stack: Next.js · React · TypeScript · Node.js · Prisma · PostgreSQL · Clerk · Tailwind CSS · Zod · Pusher · OneSignal

Foodie-POS Restaurant Point-of-Sale & QR Ordering

2024 – Present

Personal project · Live demo

- Built a multi-location restaurant POS where guests order from table QR codes and staff manage orders, a kitchen board, bills, invoices, and sales reports (30 Prisma models, 60 migrations).
- Stored all money as integer amounts (no floating point) and hardened payments with SELECT … FOR UPDATE row locking, idempotency keys bound to the company and session, server-calculated change, and bounded tips.
- Pushed real-time order updates to POS and kitchen screens over Server-Sent Events, with audible new-order alerts and browser-based bill printing.
- Implemented role-based access (owner, manager, cashier, kitchen), PIN login with rate limiting and Argon2, terminal locking, shifts and till sessions, and an audit log; wrote 120+ test files, including concurrency tests for session-creation races and parallel PIN attempts.

Stack: `Next.js` `TypeScript` `Prisma` `PostgreSQL` `NextAuth` `Zod` `Server-Sent Events` `Material UI` `Vercel`

Schoolyn Mobile React Native Companion App

2026 – Present

`In Development — Not Yet Released` · Creator & sole developer

- Building an Expo app for parents, students, and teachers on Schoolyn's versioned REST API and Clerk accounts, with push notifications, payment-proof uploads, messaging, and teacher attendance taking.
- Wrote 88 Vitest test files and Maestro end-to-end flows; tested on a physical Android device, an Android emulator, and the iOS Simulator.

Stack: `React Native` `Expo` `TypeScript` `TanStack Query` `Clerk` `OneSignal` `Vitest` `Maestro`

Blog REST API Node.js & Express Backend

2026

Personal project · Source available on request

- Built a modular TypeScript REST API with Express and Prisma (auth, users, posts, categories, comments, reactions), with JWT authentication, admin-only routes, rate-limited auth endpoints, Helmet security headers, centralized error handling, and file uploads.

Stack: `Node.js` `Express` `TypeScript` `Prisma` `PostgreSQL` `JWT` `Multer`

Marketplace Buy-and-Sell Web Application

2025 – 2026

Personal project · Live demo · Source code

- Built a marketplace with Supabase Auth, listings with Cloudinary image uploads, categories and search, favorites, buyer–seller messaging, and a seller dashboard backed by listing-view tracking.

Stack: `Next.js` `TypeScript` `Tailwind CSS` `Prisma` `PostgreSQL` `Supabase Auth` `Cloudinary`

BlogSphere Blogging Platform

2025

Personal project · Live demo · Source code

- Built a blogging platform with authentication, post creation with Cloudinary image uploads, categories, comments, and reactions.

Stack: `Next.js` `TypeScript` `Material UI` `Prisma` `PostgreSQL` `NextAuth`
